I think that Nick Anderson's graphic presentation about the toxic waste site was an excellent way to assure that more readers will take the time to become informed about this site that is adversely affecting so many people. Mr. Anderson seems to have a special talent for distilling stories such as this one (I really like FOP) down to their basic elements, making it more likely that important (and sometimes complex) information is not skimmed over or not read at all. Thank all of you at the Chronicle for staying on top of such an important issue. And thank you for providing the EPA contact information, I am copying in on this correspondence Mr. David Gray and offering that I think the EPA should move forward with cleaning up this site ASAP and worry about getting WM and the International Paper company to pay for it later.

Sincerely,

(b) (6)
